

A Device Charging Rack is a 15 inch rack specifically designed to charge multiple devices at the same time, such as smartphones, tablets, laptops, or other electronic devices.

The Device Charging Rack is equipped with caster wheels, making it easy to move from one room to another. The Device Charging Rack can also be wall-mounted. It is commonly used in educational environments, offices, conference centers, hospitals, and other public spaces that require efficient and organized device management and charging.
